Revision History

Date	Version	Notes
Date 1	1.0	Notes
Date 2	1.1	Notes

[The intention of the VnV plan is to increase confidence in the software. However, this does not mean listing every verification and validation technique that has ever been devised. The VnV plan should also be a **feasible** plan. Execution of the plan should be possible with the time and team available. If the full plan cannot be completed during the time available, it can either be modified to "fake it", or a better solution is to add a section describing what work has been completed and what work is still planned for the future. —SS]

[The VnV plan is typically started after the requirements stage, but before the design stage. This means that the sections related to unit testing cannot initially be completed. The sections will be filled in after the design stage is complete. the final version of the VnV plan should have all sections filled in. —SS]

This document ... [provide an introductory blurb and roadmap of the Verification and Validation plan —SS]

2 General Information

2.1 Summary

The software being tested is Flexin', an app that allows users to learn about the power of compounding through working out and investing. The team will be looking to test the following functions of the app:

- Step tracking and integrations with fitness data sources (Android Health Connect and, optionally, Garmin watches)
- Real-time updates of fitness data within the app
- Converting fitness progress into virtual currency and depositing it into the user's account
- Viewing account balances
- Simulated/generated financial markets
- Performance leaderboards

2.2 Objectives

The main objective of the VnV plan is to ensure that Flexin' properly teaches the impact of compounding. For the VnV plan to achieve this objective, the team will prioritize the following qualities:

- **Learnability:** The app is easy for new users to learn, as measured by the learnability requirement in the SRS (UHR-EOU-08).
- **Correctness of currency calculations:** Virtual currency earned, deposited, and displayed in account balances is calculated correctly, and operations that change balances either complete fully or are rolled back (PR-RFT-02).

- **Consistency of asset calculations:** Simulated asset values are consistent and produce the returns expected from the implemented market algorithms, including the calibration against historical market data required by PR-PA-06.

- **User confidence in the financial lessons:** Users come away trusting and understanding the financial lessons the app is intended to convey.

The following objectives are out of scope for this VnV plan:

- **Assumptions in the SRS and Hazard Analysis:** The assumptions listed in the SRS (**?**) and the Critical Assumptions section of the Hazard Analysis are taken as given and will not be verified.

- **Third-party packages and libraries:** External dependencies, such as Android Health Connect and the Garmin Connect IQ SDK, are assumed to be correct and already verified by their implementation teams (e.g. Garmin). The team does not have the time or resources to verify these libraries within the scope of this capstone. This matches the Hazard Analysis assumption that third-party health platforms keep their documented behaviour. Flexin''s own handling of outages and malformed data from these sources is still in scope (PR-RFT-03).

- **Internet connectivity:** The SRS lists a mobile data or Wi-Fi connection as part of the environment needed to reach the Flexin' backend. The strength and reliability of the user's connection will not be tested. The app's required offline behaviour (PR-RFT-01 and PR-RFT-04) is still in scope.

- **Full verification of user-reported fitness activity:** The team will not attempt to fully verify that users are not lying about completing fitness goals, as this would require too much time and resources. The SRS already assumes that fitness devices report correct data and that artificial changes are dishonest use, and SC-04 limits this risk by not allowing manual entry of activity. Small checks may be used to gauge validity in some cases (e.g. checking that a Garmin watch's heart rate reading stays above a threshold for a period of time), but validity cannot be guaranteed, especially for users without a Garmin device who track activity solely through their phone.

2.3 Custom Documents

The team is completing two custom documents (CDs), one per term:

- **CD-Fall — User/Stakeholder/Client Interview Report:** A report on interviews with the project's client and potential users, used to elicit requirements. The SRS appendix already summarizes the two interviews conducted so far: a mock interview with the client and supervisor, and an interview with a representative end user.
- **CD-Winter — Business Plan:** A business plan exploring how Flexin' could be monetized after the capstone, as the team believes the project has the potential to become a startup. It will cover the market need, market size and business model, costs, competition, and an execution plan.

2.4 Relevant Documentation

The following documents are relevant to the VnV efforts:

- **Software Requirements Specification (SRS)** (**?**): Defines the functional and non-functional requirements of Flexin', each with a fit criterion. These fit criteria are what the tests in this plan check against. The SRS also lists the assumptions that bound what is in scope for verification, and names the testing tools the team will use (JUnit for backend unit and system tests, and Detox for end-to-end tests of the mobile client).
- **Hazard Analysis:** Identifies the hazards of using Flexin' and defines twelve safety and security requirements (SR1–SR12) to mitigate them, each with a fit criterion. Its roadmap commits to implementing SR1, SR2, SR3, SR6, SR8, SR9, SR11, and SR12 within the capstone, so these are the safety and security requirements this plan verifies. Its Critical Assumptions are excluded from verification.
- **Health Connect and Garmin Connect IQ SDK documentation:** Describes how activity data is provided to Flexin'. Since these platforms are assumed to keep their documented behaviour, their documentation defines the data the integration is expected to receive.

- **Custom Documents:** The interview report (CD-Fall) records the user and client needs that the requirements were derived from, which is what validation testing checks the app against. The business plan (CD-Winter) has little direct bearing on VnV, but one SRS scalability requirement refers to it for how the product might grow after the capstone.

- **User interviews and user testing:** The interviews in the SRS appendix ground the requirements in real user needs. The SRS also plans user testing on demo builds in Term 2 (Weeks 17 and 21), which will be used to assess learnability and user confidence in the financial lessons.

3 Plan

[Introduce this section. You can provide a roadmap of the sections to come. —SS]

3.1 Verification and Validation Team

[Your teammates. Maybe your supervisor. You should do more than list names. You should say what each person's role is for the project's verification. A table is a good way to summarize this information. —SS]

3.2 SRS Verification

[List any approaches you intend to use for SRS verification. This may include ad hoc feedback from reviewers, like your classmates (like your primary reviewer), or you may plan for something more rigorous/systematic. —SS]

[If you have a supervisor for the project, you shouldn't just say they will read over the SRS. You should explain your structured approach to the review. Will you have a meeting? What will you present? What questions will you ask? Will you give them instructions for a task-based inspection? Will you use your issue tracker? —SS]

[Maybe create an SRS checklist? —SS]

3.3 Design Verification

[Plans for design verification —SS]

[The review will include reviews by your classmates —SS]
[Create a checklists? —SS]

3.4 Verification and Validation Plan Verification

[The verification and validation plan is an artifact that should also be verified. Techniques for this include review and mutation testing. —SS]
[The review will include reviews by your classmates —SS]
[Create a checklists? —SS]

3.5 Implementation Verification

[You should at least point to the tests listed in this document and the unit testing plan. —SS]

[In this section you would also give any details of any plans for static verification of the implementation. Potential techniques include code walkthroughs, code inspection, static analyzers, etc. —SS]

[The final class presentation in CAS 741 could be used as a code walkthrough. There is also a possibility of using the final presentation (in CAS741) for a partial usability survey. —SS]

3.6 Automated Testing and Verification Tools

[What tools are you using for automated testing. Likely a unit testing framework and maybe a profiling tool, like ValGrind. Other possible tools include a static analyzer, make, continuous integration tools, test coverage tools, etc. Explain your plans for summarizing code coverage metrics. Linters are another important class of tools. For the programming language you select, you should look at the available linters. There may also be tools that verify that coding standards have been respected, like flake9 for Python. —SS]

[If you have already done this in the development plan, you can point to that document. —SS]

[The details of this section will likely evolve as you get closer to the implementation. —SS]

3.7 Software Validation

[If there is any external data that can be used for validation, you should point to it here. If there are no plans for validation, you should state that here. —SS]

[You might want to use review sessions with the stakeholder to check that the requirements document captures the right requirements. Maybe task based inspection? —SS]

[For those capstone teams with an external supervisor, the Rev 0 demo should be used as an opportunity to validate the requirements. You should plan on demonstrating your project to your supervisor shortly after the scheduled Rev 0 demo. The feedback from your supervisor will be very useful for improving your project. —SS]

[For teams without an external supervisor, user testing can serve the same purpose as a Rev 0 demo for the supervisor. —SS]

[This section might reference back to the SRS verification section. —SS]

4 System Tests

[There should be text between all headings, even if it is just a roadmap of the contents of the subsections. —SS]

4.1 Tests for Functional Requirements

The subsections below group the functional requirements in the Functional Requirements section of the SRS (**?**) by feature area. Together they cover FUNC-01 to FUNC-16. FUNC-17 (Sponsored Reward Redemption) is a stretch goal in the SRS Waiting Room, so it is not tested.

[Each test uses the fields Control, Initial State, Input, Output, Test Case Derivation, and How test will be performed. —SS]

4.1.1 Account Management

These tests cover creating an account and signing in.

SRS ID	Requirement
FUNC-01	User Registration
FUNC-02	User Authentication

[Add the test cases for these requirements. —SS]

4.1.2 Fitness Tracking and Goals

These tests cover importing activity data from third-party providers and creating and tracking fitness goals.

SRS ID	Requirement
FUNC-03	Third-Party Fitness Data Import
FUNC-04	Fitness Goal Creation
FUNC-05	Fitness Goal Tracking

[Add the test cases for these requirements. —SS]

4.1.3 Rewards and Virtual Currency

These tests cover awarding virtual currency for activity and keeping each user's balance.

SRS ID	Requirement
FUNC-06	Reward Allocation
FUNC-07	Virtual Currency Tracking

[Add the test cases for these requirements. —SS]

4.1.4 Simulated Investing

These tests cover the portfolio and trading features of the simulated market.

SRS ID	Requirement
FUNC-08	Portfolio Creation
FUNC-09	Asset Purchase
FUNC-10	Asset Sale
FUNC-11	Transaction Recording
FUNC-12	Portfolio Performance Calculation

[Add the test cases for these requirements. —SS]

4.1.5 Community and Leaderboards

These tests cover friends lists and public and private leaderboard groups.

SRS ID	Requirement
FUNC-13	Leaderboard Participation
FUNC-14	Friend Management
FUNC-15	Private Leaderboards

[Add the test cases for these requirements. —SS]

4.1.6 Progress Reporting

These tests cover the summaries of activity, goals, earnings, portfolio performance, and standings.

SRS ID	Requirement
FUNC-16	Progress Reporting

[Add the test cases for these requirements. —SS]

4.2 Tests for Nonfunctional Requirements

The subsections below follow the nonfunctional requirement sections of the SRS (**?**). Each one lists the SRS subsections and requirement IDs that its tests cover.

[Each test uses the fields Type, Initial State, Input/Condition, Output/Result, and How test will be performed. Static tests, such as reviews, inspections, and walkthroughs, should instead say who is involved and how the review is run. —SS]

4.2.1 Look and Feel

These tests cover the Look and Feel Requirements section of the SRS.

Appearance Covers LF-APP-01 to LF-APP-05.

[Add the test cases for these requirements. —SS]

Style Covers LF-STY-01 to LF-STY-04.

[Add the test cases for these requirements. —SS]

4.2.2 Usability and Humanity

These tests cover the Usability and Humanity Requirements section of the SRS.

Ease of Use Covers UHR-EOU-01 to UHR-EOU-09.
[Add the test cases for these requirements. —SS]

Personalization and Internationalization Covers UHR-PER-01 to UHR-PER-04, UHR-INT-01.
[Add the test cases for these requirements. —SS]

Learning Covers UHR-LRN-01 to UHR-LRN-04.
[Add the test cases for these requirements. —SS]

Understandability and Politeness Covers UHR-UND-01 to UHR-UND-03, UHR-POL-01 to UHR-POL-05.
[Add the test cases for these requirements. —SS]

Accessibility Covers UHR-ACC-01 to UHR-ACC-06.
[Add the test cases for these requirements. —SS]

4.2.3 Performance

These tests cover the Performance Requirements section of the SRS.

Speed and Latency Covers PR-SL-01 to PR-SL-04.
[Add the test cases for these requirements. —SS]

Safety-Critical Covers PR-SC-01 to PR-SC-08.
[Add the test cases for these requirements. —SS]

Precision or Accuracy Covers PR-PA-01 to PR-PA-06.
[Add the test cases for these requirements. —SS]

Robustness or Fault-Tolerance Covers PR-RFT-01 to PR-RFT-04.
[Add the test cases for these requirements. —SS]

Capacity Covers PR-C-01, PR-C-02.
[Add the test cases for these requirements. —SS]

Scalability or Extensibility Covers PR-SE-01 to PR-SE-03.
[Add the test cases for these requirements. —SS]

Longevity Covers PR-L-01, PR-L-02.
[Add the test cases for these requirements. —SS]

4.2.4 Operational and Environmental

These tests cover the Operational and Environmental Requirements section of the SRS.

Productization Covers PROD-01, PROD-02.
[Add the test cases for these requirements. —SS]

4.2.5 Maintainability and Support

These tests cover the Maintainability and Support Requirements section of the SRS.

Maintenance Covers MAS-MNT-01 to MAS-MNT-05.
[Add the test cases for these requirements. —SS]

Supportability Covers MAS-SUP-01.
[Add the test cases for these requirements. —SS]

Adaptability Covers MAS-ADPT-01 to MAS-ADPT-03.
[Add the test cases for these requirements. —SS]

4.2.6 Security

These tests cover the Security Requirements section of the SRS.

Access Covers SEC-ACC-01 to SEC-ACC-05.
[Add the test cases for these requirements. —SS]

Integrity Covers SEC-INT-01 to SEC-INT-03.
[Add the test cases for these requirements. —SS]

Privacy Covers SEC-PRV-01 to SEC-PRV-03.
[Add the test cases for these requirements. —SS]

Audit Covers SEC-AUD-01, SEC-AUD-02.
[Add the test cases for these requirements. —SS]

Immunity Covers SEC-IMM-01 to SEC-IMM-03.
[Add the test cases for these requirements. —SS]

4.2.7 Cultural

These tests cover the Cultural Requirements section of the SRS.

Cultural Covers CUL-01, CUL-02.
[Add the test cases for these requirements. —SS]

4.2.8 Compliance

These tests cover the Compliance Requirements section of the SRS.

Legal Covers COMP-LEG-01 to COMP-LEG-07.
[Add the test cases for these requirements. —SS]

Standards Compliance Covers COMP-STD-01 to COMP-STD-07.
[Add the test cases for these requirements. —SS]

4.2.9 User Documentation and Training

These tests cover the User Documentation and Training Requirements section of the SRS.

User Documentation Covers DOC-01 to DOC-04.
[Add the test cases for these requirements. —SS]

Training Covers TRN-01 to TRN-03.

[Add the test cases for these requirements. —SS]

4.3 Traceability Between Test Cases and Requirements

[Provide a table that shows which test cases are supporting which requirements. —SS]

5 Unit Test Description

[This section should not be filled in until after the MIS (detailed design document) has been completed. —SS]

[Reference your MIS (detailed design document) and explain your overall philosophy for test case selection. —SS]

[To save space and time, it may be an option to provide less detail in this section. For the unit tests you can potentially layout your testing strategy here. That is, you can explain how tests will be selected for each module. For instance, your test building approach could be test cases for each access program, including one test for normal behaviour and as many tests as needed for edge cases. Rather than create the details of the input and output here, you could point to the unit testing code. For this to work, you code needs to be well-documented, with meaningful names for all of the tests. —SS]

5.1 Unit Testing Scope

[What modules are outside of the scope. If there are modules that are developed by someone else, then you would say here if you aren't planning on verifying them. There may also be modules that are part of your software, but have a lower priority for verification than others. If this is the case, explain your rationale for the ranking of module importance. —SS]

5.2 Tests for Functional Requirements

[Most of the verification will be through automated unit testing. If appropriate specific modules can be verified by a non-testing based technique. That can also be documented in this section. —SS]

5.2.1 Module 1

[Include a blurb here to explain why the subsections below cover the module. References to the MIS would be good. You will want tests from a black box perspective and from a white box perspective. Explain to the reader how the tests were selected. —SS]

1. test-id1

   Type: [Functional, Dynamic, Manual, Automatic, Static etc. Most will be automatic —SS]

   Initial State:

   Input:

   Output: [The expected result for the given inputs —SS]

   Test Case Derivation: [Justify the expected value given in the Output field —SS]

   How test will be performed:

2. test-id2

   Type: [Functional, Dynamic, Manual, Automatic, Static etc. Most will be automatic —SS]

   Initial State:

   Input:

   Output: [The expected result for the given inputs —SS]

   Test Case Derivation: [Justify the expected value given in the Output field —SS]

   How test will be performed:

3. ...

5.2.2 Module 2

...

5.3 Tests for Nonfunctional Requirements

[If there is a module that needs to be independently assessed for performance, those test cases can go here. In some projects, planning for nonfunctional tests of units will not be that relevant. —SS]

[These tests may involve collecting performance data from previously mentioned functional tests. —SS]

5.3.1 Module ?

1. test-id1

   Type: [Functional, Dynamic, Manual, Automatic, Static etc. Most will be automatic —SS]

   Initial State:

   Input/Condition:

   Output/Result:

   How test will be performed:

2. test-id2

   Type: Functional, Dynamic, Manual, Static etc.

   Initial State:

   Input:

   Output:

   How test will be performed:

5.3.2 Module ?

...

5.4 Traceability Between Test Cases and Modules

[Provide evidence that all modules have been considered. —SS]

6 Appendix

This is where you can place additional information.

6.1 Symbolic Parameters

The definition of the test cases will call for SYMBOLIC_CONSTANTS. Their values are defined in this section for easy maintenance.

6.2 Usability Survey Questions?

[This is a section that would be appropriate for some projects. —SS]

7 Appendix — Generative AI Use Disclosure

[ChatGPT (version 5) was used to brainstorm ideas for the template for this disclose section. —SS]

7.1 AI Tools Used

[Give the name of the AI tool(s) used and the version. —SS]

7.2 How and Where Used

[Explain what the tool(s) were used for. Examples include: brainstorming, explaining a technical concept, reviewing the document, generating or modifying text, generating or modifying diagrams, identifying errors or omissions or inconsistencies. —SS]

[For each of the uses, identify which parts of the document were affected. —SS]

[You do not need to report every interaction, but you should disclose the uses that materially contributed to your work —SS]

7.3 Verification of AI-Generated Content

[

- Describe how the team checked AI-generated or AI-assisted material before including it in the document.
- In particular, verify factual claims, technical assertions, requirements, calculations, references, and other information for which an AI system may produce incorrect or fabricated results.
- **The team is responsible for the accuracy, completeness, consistency, and appropriateness of the submitted document, regardless of whether material was generated by a human or an AI system.**

—SS]

8 Appendix — Reflection

[This section is not required for CAS 741 —SS]

The information in this section will be used to evaluate the team members on the graduate attribute of Lifelong Learning.

The purpose of reflection questions is to give you a chance to assess your own learning and that of your group as a whole, and to find ways to improve in the future. Reflection is an important part of the learning process. Reflection is also an essential component of a successful software development process.

Reflections are most interesting and useful when they're honest, even if the stories they tell are imperfect. You will be marked based on your depth of thought and analysis, and not based on the content of the reflections themselves. Thus, for full marks we encourage you to answer openly and honestly and to avoid simply writing "what you think the evaluator wants to hear."

Please answer the following questions. Some questions can be answered on the team level, but where appropriate, each team member should write their own response:

1. What went well while writing this deliverable?

2. What pain points did you experience during this deliverable, and how did you resolve them?

3. What knowledge and skills will the team collectively need to acquire to successfully complete the verification and validation of your project? Examples of possible knowledge and skills include dynamic testing knowledge, static testing knowledge, specific tool usage, Valgrind etc. You should look to identify at least one item for each team member.

4. For each of the knowledge areas and skills identified in the previous question, what are at least two approaches to acquiring the knowledge or mastering the skill? Of the identified approaches, which will each team member pursue, and why did they make this choice?
